# Iteration Plan < Iteration 3>

### 1. Introduction

### 1.1 Purpose

In this third iteration, the team's mission is to develop the third draft of Sportify web app. For this iteration, the backend – including authentication, database and event management will be implemented. This will improve upon the user interface that was set up in iteration 2 and will add more functionality to the web app.

# 1.2 Scope

This plan targets tasks and activities assignments especially in relation to the backend and database management. This plan offers a vision on how these tasks will be assigned among team members and what roles are involved during this iteration:

Account Management: this person will work on the authentication and handling of data when it comes to user accounts

Event Creation: this person will work with our cloud provider to work on the events database

Event Search: this person will work with the database to display accurate search results based on the queries received

Homepage and Design: this person will work on making sure the backend is set up correctly for accurate homepage buttons.
